**TRIBOS® forges a new partnership with Mazda Malaysia to create the
Mazda Total Protection Program with TRIBOS®**

TRIBOS® coatings “the world’s most durable protective coatings” are very proud to be selected by Mazda Malaysia as their recommended protective coating partner to support the launch of the new CX-5.

As part of this new arrangement each new Mazda CX-5 will be treated with the Mazda Total protection program using **TRIBOS®** ahead of its release in the market. This will ensure that the cars maintain their showroom finish for the years to come.

TRIBOS® is not a polish or a conventional surface treatment. It’s a state-of-the-art process – a genuine scientific breakthrough. An active polymer shield so durable, that brilliance of colour and shine is locked in for years. For paint, glass, alloy and fabrics, it’s the ultimate in total vehicle protection.

TRIBOS® was initially developed for use in the Marine sector to enhance and preserve the gloss and colour of Superyacht surfaces and to protect from the damaging effects of salt, UV and other contaminants. This same product is used in the automotive market to protect the surfaces of vehicles around the globe. As a testament to the strength of our products they are also used in the aviation sector to enhance the gloss on paint surfaces and improve airflow.

TRIBOS® has been tested and approved for use by many of the worlds’ leading manufactures of Superyachts, aircraft and automotive vehicles and offers the only total protection package for all the surfaces of your vehicle.

TRIBOS® paint protection increases gloss levels, even on newly painted surfaces leading to enhanced appearance. In addition to this our unique application system increases the depth of colour and the protective nature of coating prevents fade and degradation caused by the elements protecting the value of your vehicle. Even older paint surfaces are returned to a better than new finish that is backed by a genuine guarantee.

There is no need for further polishing or waxing as surfaces are easier to clean and will return to a showroom shine with a simple wash-down.

TRIBOS® Glass Protection forms a hydrophobic barrier that actively rejects water, so much so that the rain flies off the screen when traveling at speed. Our unique application system ensures the pores of glass are free from all contaminates improving visibility and safety. The smoother surface reduces wiper judder and makes the glass much easier to clean.

THE PRESERVATION OF PERFECTION

TRIBOS® Alloy protection creates an incredibly hard yet smooth coating that protects the surfaces of the alloy from brake dust, salt and other harmful contaminants. As the surfaces is so smooth the dirt particles have nothing to adhere to so even baked on brake dust comes off with a simple wash-down.

TRIBOS® fabric protection completes the protection system by forming a hydrophobic barrier that reduces staining and protects against spills.

During a recent trip to Malaysia we were very happy to witness the first CX-5 being passed to its proud owner Tan Sri Abdul Embong pictured below.
